Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

53703-334241

Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

Additional Comments:

It is getting difficult to obtain crushed stone (limestone) in the Dane County area. We strongly agree that there is a need for this material and that an existing quarry is the obvious solution.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Stone shortages for Dane County communities are not far into the future, and with it will come price increases due to transportation distance and fuel use, and impacts such as increased tail pipe emissions, greenhouse gases, and road wear and maintenance—all elements that increase costs and erode the economic strength of the area. The manufacture and distribution of aggregates from the Oak Park Quarry provide real wages for more than 45 local families and contribute to a vibrant, rural economy. **For these reasons and more, we ask you to APPROVE Forever Sandfill & Limestone's Oak Park Quarry CUP renewal application.**

Additional Comments: CRUSHED STONE & SAND is vital for maintaining roads safely and is only found in certain areas so its important that mining is not held hostage because of certain myths perpetuated by unreasonable neighbors!

Dear Dane County Zoning & Land Regulation Committee,

Did you know the Town of Deerfield has more than 45 miles of roadway and just one commercial quarry?

The Oak Park Quarry has operated safely and supported our community for decades. It is critical that access to its crushed stone and construction aggregates are maintained so we can continue to meet the needs of our community at affordable prices. The quarry's crushed stone materials are needed, located close to key transportation corridors, and meet State specifications for quality.

We support Forever Sandfill & Limestone, a company respected for their dependability and quality products, and ask you to renew their Oak Park Quarry CUP.

Additional Comments:
difficult to replace local infrastructure, such as a quarry, should be protected to give the County access to a local material supplier that can support future building projects.
