

Environmentally Sensitive Areas & Public Lands

- State Natural Resource Areas
- Proposed Ice Age Trail Corridor Boundary
- Completed Ice Age Trail Segments
- Major Watershed Boundaries
- Sub-Watershed Boundaries
- Grassland/Prairie Management Area Boundary
- Slopes > 20%
- Slopes > 12%
- Open Space/Environmental Corridors\*
- Wetlands\*\*
- Prairie Remnants/Oak Savannas
- Known Archaeological & Historical Sites\*\*\*

Note: This map is for general informational use only, and is not to be used to obtain detailed siting information.

\*Mapped by the DCRPC based on the Regional Development Guide open space overlay. In August 1997, this layer was refined to reflect town plans. Environmental corridors are continuous systems of open space that include environmentally sensitive lands and natural resources requiring protection from disturbance and development, and lands needed for open space and recreational use. They are based mainly on drainageways and stream channels, floodplains, wetlands, and other resource lands and features.

\*\*Extracted from WDNR's land cover dataset. Mapped wetlands are at least 2 acres in size. A wetland is defined as the following: an area with water at, near or above the land surface long enough to be capable of supporting aquatic or hydrophytic vegetation, and which has soils indicative of wet conditions.

\*\*\*Represents known occurrences of archaeological and historical sites based primarily on inventories done by the Wisconsin State Historical Society. Locations are approximate.

3500 0 3500 Feet

Adopted: May 6, 2002.
