January 9th, 2019

Dear Sir,

In response to the concern about interference with the city wireless system, we operate within FCC licensed bands of wireless spectrum which do not overlap with any other entity. Our equipment is licensed and monitored by the FCC and any interference issues brought to us we respectively will be given the highest priority. We will work with all parties to ensure all interference issues are investigated and resolved as soon as they are brought to our attention.

All equipment is FCC compliant from an operational tolerance perspective. Regarding licensed and unlicensed bands (as allowed by FCC), the equipment does not cause external interference nor transmit outside of the allowed and exclusive frequencies and/or thresholds. The emissions are also in alignment with FCC guidelines.

Finally, as stated in more detail on the enclosed affidavit the following equipment will be installed on the proposed site. We will install AT&T mobile voice and Data as well as First Net emergency services. We will also install Bug Tussel Wireless fixed internet services.

If you have additional questions about this matter, please let me know.

Thank you.

Scott Reiter

RF Director

Bug Tussel Wireless
