The County is developing facilities at its East District Campus including the Medical Examiner's Office, Highway Garage, IT backup facility, and 911 backup facility. All of these operations will require high speed data connectivity to the county's computer network. The location is not presently served by high speed data fiber optic cable.

The county issued bid #115068 with the intention of awarding a contract for the installation of fiber optic cable to serve this location. Distribution of data connections among the various facilities on the campus was included in the base bids for the Medical Examiner and highway garage. The county received three responses to the bid. The lowest bidder is InterCom Construction, Inc. with a bid of \$115,773.

Funds were included in the capital budget for this project. The borrowing to support this project will have a term of five years.

THEREFORE BE IT RESOLVED that a contract to install fiber optic cable to serve the East District Campus in the amount of \$115,773 be awarded to InterCom Construction, Inc. and that the County Executive and County Clerk be authorized to execute the contract documents.
