

# Site Host Selection Update

*EV Advisory Commission Meeting, May 19, 2025*

Consistent with our grant application, we will select site hosts via a competitive process.

Recall that we are seeking 60-70 site hosts that meet at least one of our priorities, which are:

1. High-density urban and suburban areas where residents lack access to private charging networks
2. Rural areas where the private charging market is less likely to install charging stations
3. Multi-modal transportation hubs where EV charging can support public and active transit options

## ***How Does Selection Work?***

Interested hosts must apply via a Request for Proposals process consistent with Dane County procurement rules.

- The RFP for site hosts will be posted on the Dane County system; we'll share out the link once it is live.
- Applications are due Friday, June 13 at 2:00 pm.

## ***Where Can Potential Site Hosts Learn More?***

- To promote the opportunity, we've created a webpage:  
<https://www.daneclimateaction.org//Initiatives/Charge-Up-Dane-Co/Site-Host-for-EV-Charging>
- We will host a webinar for potential site hosts on Thursday, May 29 at 10:00 am. The webinar will be recorded and available on our webpage.

At the May 19 EV Advisory Commission meeting we will talk about ways that EV Advisory Commission members can help to promote this opportunity so that we receive a robust response to the RFP.

## ***What Happens After June 13?***

1. After the RFP deadline, a Dane County team will review the submissions to determine which sites meet at least one priority and seem viable. Then, the KL Engineering team will do a desktop review of those initial sites to further verify the viability of the sites.
2. The County will sign an agreement with the sites that pass that technical verification
3. The KL Engineering team will do the initial on-site design and environmental review, which will give Dane County the information we need to request construction dollars from FHWA.
