

Photos and streamflow data (Bruce St.) of Badger Mill Creek in Verona from 14 Feb 2023 when discharge of MMSD effluent was shut off. Note the low water level with recently installed instream habitat structures completely above the water line. Flow rate on the 14th (yellow) was 50% of median flow (dotted line) and flow for the same time in 2022 (purple). Transient peaks in the 2023 tracing represent precipitation events
