

# January 2026 Program Report

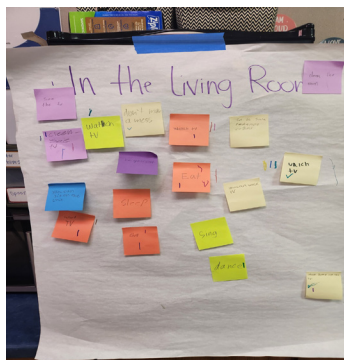

## Preparing Elementary Students to Be Home

Kula Yang, Extension Family Engagement and Relationships Educator, partnered with Westside Elementary School in Sun Prairie to deliver a 1.5-hour Home Alone workshop that helps elementary students build skills and confidence for staying home alone safely, especially during school breaks.

After seeing the positive impact of the workshop through another school, Community Schools Site Coordinator Cindy Kimbrow collaborated with Extension to bring the program to Westside's afterschool setting. Students participated in hands-on activities, discussions, and planning exercises, and received take-home worksheets to continue learning with their caregivers.

This effort reached 50 elementary students and is part of a program that has served more than 100 students overall. The workshop supports a diverse and vulnerable audience, strengthens relationships within the afterschool program, and deepens Extension's partnership with the Sun Prairie School District.

## Preparing Gardens for Winter

Lisa Johnson, our Horticulture Educator, reached 53 community members through an online class focused on winter-proofing gardens, lawns, and landscapes. Lisa Johnson, our Horticulture Educator, helped participants learn how to protect trees and shrubs, prepare vegetable gardens, and preserve overwintering habitat for beneficial insects to improve plant survival and support environmental stewardship. The program emphasized cost-saving practices such as preventing winterburn and wildlife damage to woody plants, as well as reducing pests and disease in the following growing season.

Participant feedback highlighted practical takeaways including leaving leaves for insect habitat, better preparing shrubs for winter, and properly winterizing vegetable gardens, with several participants planning to share what they learned with others.

One participant said, *"I have a neighborhood cleanup coming up next weekend that I plan to bring some of this knowledge to!"*

The University of Wisconsin-Madison Division of Extension provides equal opportunities in employment and programming in compliance with state and federal law.

## Building Financial Stability Through Coaching

Extension's financial coaching program supports individuals and families in creating financial goals and building money management skills during times of income change or unexpected hardship. Clare Dahl, our Financial Educator, provides personalized, one-on-one coaching that helps participants feel confident and in control of their finances.

Across Wisconsin, many residents face financial strain, with a significant number living in poverty or within the Asset Limited, Income Constrained, Employed (ALICE) threshold and reporting challenges with budgeting, debt, and savings. Extension's coaching helps participants create spending plans, reduce debt, and save for emergencies using a flexible approach.

In 2024, 94% of participants identified clear financial goals, 81% felt empowered to handle financial challenges independently, and 80% reported increased hope and confidence. Clients paid off \$43,560 in debt and saved \$35,850, benefiting an additional 449 family members.

One participant shared, *"I planned ahead, tracked my spending, and felt less overwhelmed by saving versus spending. The month was a success, and I feel more accountable and confident about my financial future."*

## Science-Based Conservation in the Upper Sugar River

Extension provided ongoing guidance to the Farmers for the Upper Sugar River producer-led watershed group, supporting planning meetings and educational efforts that advance conservation practices grounded in research. Will Fulwider, our Regional Crops Educator, and Wade Moder, our Natural Resources Educator, worked together to advise the group, reaching 90 contacts and engaging 15 farmers who meet regularly throughout the year.

This collaboration helps ensure workshops and field days remain science-based and relevant to Wisconsin agriculture, countering misinformation and strengthening farmer trust. Through this partnership, Extension has supported on-farm research and demonstrations, increased producer engagement, and maintained a strong Extension presence at field days and workshops, while staying closely connected to the evolving needs of farmers in Dane County.

## Youth Voice in the Dane County Youth Assessment

Youth played a central role in evaluating and shaping improvements to the Dane County Youth Assessment Survey, offering recommendations to strengthen survey design, administration, and outreach. Their insights focused on increasing engagement and ensuring the data collected more accurately reflects youth experiences to better inform program, policy, and systems change efforts.

Taylor Seale, our Community Youth Development Educator, supported this youth-led work and collaborated with Dane County Youth Assessment partners to elevate youth engagement for future survey cycles. As a result of youth-informed changes, the 2024 survey achieved its highest participation to date, strengthening both data quality and youth awareness of how survey results influence decisions across Dane County.
