RE: CUP 2582 Mineral extraction summary

To whom it may concern,

On August 25, 2023, I conducted a site inspection to follow up on the stabilization of the berms and the location and slopes of the westerly berm.

The berm along Center Road is completed and mulch has been spread over the entire berm. This will help the seeding efforts and prevent additional weeds. Talking with Kevin Hahn, the plan is to landscape the berm spring of 2024 with evergreens. This is acceptable to ensure the plantings have a successful opportunity to grow.

Looking southerly along Center Rd.

The berm along the west side of the property meets the minimum setback of 5 feet and has been re-shaped in some areas to meet the requirements of a slope of 3:1 or flatter. In addition, this berm has also been mulched and grass is growing.

Looking north along the westerly property line.

Top of westerly berm.

Looking northeast at current operations.

Lastly, the operator will need to monitor the berms over time to ensure stabilization is being met during all aspects of the operation. This means addressing any rill erosion issues with additional grading, seeding and mulching.
